THE COMPLETE GUIDE TO KOOLTHERM[®] DUCT INSULATION

Market leader Kingspan Insulation has launched the latest edition of the comprehensive 'all in one' guide to the Kingspan **Kooltherm**[®] Duct Insulation System which comprises a range of rigid phenolic insulation products.

The convenient A4 sized 40-page Guide provides engineers and contractors with detailed but easy to read information about all aspects of Kingspan **Kooltherm**[®] Duct Insulation, Rectangular Duct Support Inserts and Crocodile Strips. It means that any information about the Kingspan **Kooltherm**[®] Duct Insulation System can be sourced from a single publication, a considerable advantage over loose-leaf data, which may easily be misplaced.

The guide explains clearly and concisely how the Kingspan **Kooltherm**[®] Duct Insulation System can provide the most effective ducting insulation solution when compared with mineral fibre and nitrile rubber.

With an impressive gallery of prestigious projects and comprehensive descriptions of all the products within the Kingspan **Kooltherm**[®] Duct Insulation System, the literature addresses important factors relating to the design of HVAC ducting systems and also clarifies a wide range of important issues which affect the specification of insulated ducting such as the TIMSA guide, BS 5422:2001, NHS CO₂, sustainability, long term degradation and moisture and exacerbated heat loss/gain.

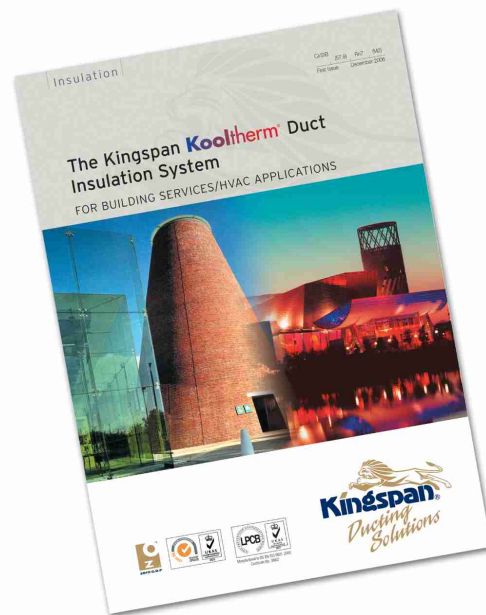

Copies of the new Guide can be obtained by contacting Kingspan Insulation Marketing Department on the following numbers:

UK
