KINGSPAN KOOLDUCT SYSTEM IS THE BEST BUY FOR QVC STUDIOS

The UK's Leading TV Shopping Channel QVC has recently refurbished part of their studios at Marco Polo House in south west London, and the Kingspan KoolDuct System was considered to be the "best option" for this project.

The work involved an extensive upgrade of the ground floor Control Room A which was enlarged to accommodate the latest sophisticated transmission technology for the station's "backroom" studio production staff and technicians.

The UK's Leading TV Shopping Channel QVC has recently refurbished part of their studios at Marco Polo House in south west London, and the Kingspan KoolDuct® System was considered to be the "best option" for this project.

A severe restriction on space in the ceiling void throughout the revamped control room complex was why M&E Consultants BHP Consulting Ltd chose the compact and advanced pre-insulated ducting technology of the Kingspan KoolDuct System.

David Barker, of BHP Consulting Ltd explained: "The lack of space in the ceiling void meant that the multi-zone air conditioning ductwork systems would not be adequately insulated and vapour sealed.

"This could only be ensured by using the Kingspan KoolDuct System. Conventional sheet metal ducting would have fitted too tightly to the soffit and the other ducting to then be covered with thermal insulation."
