KOOLDUCT IS GOOD NEWS FOR NEW £60 MILLION TRINITY MIRROR NEWSPAPER PRINTING PRESS

Kingspan Insulation's revolutionary KoolDuct zero ODP System of pre-insulated ducting technology has provided the ideal high-speed solution for a new Midlands printing press being built for newspaper publishing giants Trinity Mirror.

The £60 million plus state of the art complex at Fort Dunlop in Birmingham, will print all of the Group's local and regional titles, including the Birmingham Evening Mail, Birmingham Post, Sunday Mercury and Coventry Evening Telegraph.

Kingspan Insulation's revolutionary KoolDuct[®] System of pre-insulated ducting technology has provided the ideal high-speed solution for a new Midlands printing press being built for newspaper publishing giants Trinity Mirror

A total of 3,500 square metres of the Kingspan KoolDuct zero ODP System has been installed throughout the three storey building and plant room by Ductform UK Ltd. who worked closely with mechanical contractors NG Bailey & Co.

The need for a speedy installation of the ducting was met by the fast track Kingspan KoolDuct zero ODP single fix system which, unlike traditional sheet metal ducting, does not need to be lagged with insulation as a second operation.

A further advantage was the fact that scaffolding could be dismantled immediately after each stage of the installation rather than remain in place for the lagging process. The prompt dismantling of scaffolding removed obstructions for other contractors on site and was also cost efficient.

Engineering Services Consultants, Hilson Moran Partnership specified Kingspan KoolDuct zero ODP as the project benefited from the ease and speed of installation and the fact that the System has a proven track record for durability.
